

ABSTRACT OF THE DISCLOSURE

A connector 2 includes a connector housing 3, terminal metal fittings and a packing 1. The connector housing 3 which accommodates the terminal metal fittings is coupled with a complementary connector housing. The packing 1 keeps watertight the boundary between the boundary between the connector housing 3 which is an article and supplementary connector housing 6 which is another article. The packing 1 includes a ring-shaped packing body 13, outer and inner protruding pieces 14 and 15 which protrude from the outer and inner edges of the packing body 13, respectively, holes 16 and securing pieces 17. The thickness of the packing body 13 is larger than the width thereof. Protruding pins 11 of the connector housing 3 are inserted in the holes 16, respectively. The securing pieces 17 are secured in receiving holes of the connector housing 3.
